

Matthew Dong

matthew.dong@nyu.edu | (908)-240-4703 | <https://linkedin.com/in/matt-j-dong>

EDUCATION:

New York University (Graduate School of Arts and Science)

New York, NY | May 2025 | GPA: 3.92/4

M.S. in Computer Science

Relevant Coursework: DevOps and Agile Methodologies, Big Data Application Development, Database Systems, Programming Languages, Multicore Processors, Deep Learning

New York University (College of Arts and Science)

New York, NY | May 2024 | GPA: 3.93/4

B.A. in Computer Science, B.A. in Data Science

Dean's List for the Academic Years of 2021-2022 and 2022-2023

Relevant Coursework: Fundamentals of Machine Learning, Advanced Topics: Deep Learning, Responsible Data Science, Basic Algorithms, Operating Systems, Big Data for Analytics Applications, Linear Algebra, Probability and Statistics

PERSONAL PROJECTS: (More projects available on GitHub: <https://github.com/Matt-J-Dong>)

Refined-Chat-Bot (Python: PyTorch)

- Fine-tuned existing open source LLMs to achieve the objective of having them respond to questions in character.
- Tuned the hyperparameters of models such as Falcon-7B and LLaMA to find which one would perform the best.
- Coordinated with a group to get the project done with limited time and resources.

Top-Towns-To-Take-Over-Tech (Spark Scala, Java MapReduce, Shell)

- Built an analytic with a group to find out which American cities are the best for tech careers.
- We cleaned, profiled, and performed ETL on our data before joining all the datasets together, and displayed our results through a Tableau visualization and a Hive warehouse.

Twitter (Swift)

- Developing a functioning version of Twitter that utilizes the Twitter API and Swift views in order to allow the user to view tweets from people that they follow, and directly post, like, and retweet tweets.

Word Search (Java)

- Created a type of tree that stored words utilizing recursion. Implemented a binary search algorithm that would scan these trees for key words, modeled off of existing search algorithms in order to display relevant files to users based on their input.

Chinook Database (SQL, SQLite)

- Used SQL to query the chinook database for specific necessary information. Key aspects include joins, using groups to get averages, and sorting.

WORK EXPERIENCE:

E-Commerce DevOps Intern: Colgate-Palmolive

Piscataway, NJ | June 2022-December 2024

- Developed Python scripts that utilize cloud functions and API gateways to parse JSON alerts for various applications and send them to Google Chat spaces using webhooks.
- Refactored code to fit company standards and allowed non-technical staff to easily modify parameters in the future.
- Completed new workflows and modified existing ones with a focus on reusability, scalability, and efficiency.
- Experienced different aspects of company culture and worked in a non-school environment by participating in meetings and code reviews, as well as making presentations to both technical and non-technical staff.

Data Analyst Intern: Sanofi US

Bridgewater, NJ | December 2020-February 2021

- Utilized R in order to analyze COVID-19 data, while keeping statistical principles in mind.
- Modified and analyzed movie data utilizing machine
